Stop Nosebleeds Faster Than Ever

Instaclot is a reusable handheld device that delivers a vasoconstricting agent and an absorbent element to a nosebleed in a single push.

How It Works

Have it ready for when you get a nosebleed!

1. Drop the cartridge into the main body and screw on the nose-head.

2. Insert the cotton from the bottom. Then insert the stem, twist it to the right, and pull it down. Instaclot is now locked.

3. When you get a nosebleed, push the stem up, twist the stem to the left, insert the nosehead into your nose, and push the stem up.

4. Gently pinch the nose to release the constricting element, and wait 5 minutes before removing the cotton.

5. Wash everything off and repeat steps 1 & 2 so you are prepared for your next nosebleed.
